

MILITARY SPECIFICATION

SEMICONDUCTOR DEVICE, TRANSISTOR, NPN, SILICON, SWITCHING, LOW-POWER

TYPE 2N706

This specification is mandatory for use by all Departments and Agencies of the Department of Defense.

1. SCOPE

1.1 Scope. This specification covers the detail requirements for NPN, silicon, switching, low-power transistor.

1.2 Physical dimensions. See figure 1 (TO-18)

1.3 Maximum ratings.

$\frac{P_{T1}}{T_A = 25^\circ C}$	V_{CBO}	V_{EBO}	V_{CEO}	V_{CER}	T_{stg}
mW	Vdc	Vdc	Vdc	Vdc	$^\circ C$
300	25	5.0	15	20	-65 to +200

^{1/} Derate linearly 2.0 mW/ $^\circ C$ for $T_A > 25^\circ C$.

1.4 Primary electrical characteristics.

	h_{FE} $I_C = 10 \text{ mAdc}$ $V_{CE} = 1.0 \text{ Vdc}$	$ h_{fe} $ $I_C = 10 \text{ mAdc}$ $V_{CE} = 10 \text{ Vdc}$ $f = 100 \text{ MHz}$	$V_{CE(sat)}$ $I_C = 10 \text{ mAdc}$ $I_B = 1.0 \text{ mAdc}$	$V_{BE(sat)}$ $I_C = 10 \text{ mAdc}$ $I_B = 1.0 \text{ mAdc}$	Switching		
					t_s	t_{on}	t_{off}
			Vdc	Vdc	nsec	nsec	nsec
Min	30	2.0	---	0.7	5.0	---	---
Max	120	7.0	0.5	0.9	35	40	75

2. APPLICABLE DOCUMENTS

2.1 The following documents, of the issue in effect on date of invitation for bids or request for proposal, form a part of the specification to the extent specified herein.

SPECIFICATION

MILITARY

MIL-S-19500 - Semiconductor Devices, General Specification for.

FSC 5961

STANDARDS

MILITARY

- MIL-STD-202 - Test Methods for Electronic and Electrical Component Parts.
- MIL-STD-750 - Test Methods for Semiconductor Devices.
- MIL-STD-1276 - Leads, Weldable, for Electronic Component Parts.

(Copies of specifications, standards, drawings, and publications required by suppliers in connection with specific procurement functions should be obtained from the procuring activity or as directed by the contracting officer.)

3. REQUIREMENTS

3.1 General. Requirements shall be in accordance with MIL-S-19500, and as specified herein.

3.2 Abbreviations, symbols, and definitions. The abbreviations, symbols, and definitions used herein are defined in MIL-S-19500.

3.3 Design, construction, and physical dimensions. Transistors shall be of the design, construction, and physical dimensions shown on figure 1.

3.3.1 Lead material and finish. The lead material shall be Type K (Kovar) or Type F (Alloy 52) conforming to requirements in MIL-STD-1276. The use of a nickel under-plating is optional; if used, it will be 100 microns maximum. The finish shall be gold (as specified in MIL-STD-1276); however, if so specified in the contract or order, the finish may be tin-coated over gold. This tin-finish requirement shall not be construed as adversely affecting the qualified-product status of the device, or applicable JAN marking (see 6.2).

3.3.1.1 Selectivity of lead material. If lead material need be specified, it shall be specified in the contract or order (see 6.2).

3.4 Performance characteristics. Performance characteristics shall be as specified in tables I, II, and III.

3.5 Marking. The following marking specified in MIL-S-19500 may be omitted from the body of the transistor at the option of the manufacturer: Manufacturer's identification.

4. QUALITY ASSURANCE PROVISIONS

4.1 Sampling and inspection. Sampling and inspection shall be in accordance with MIL-S-19500 and as specified herein.

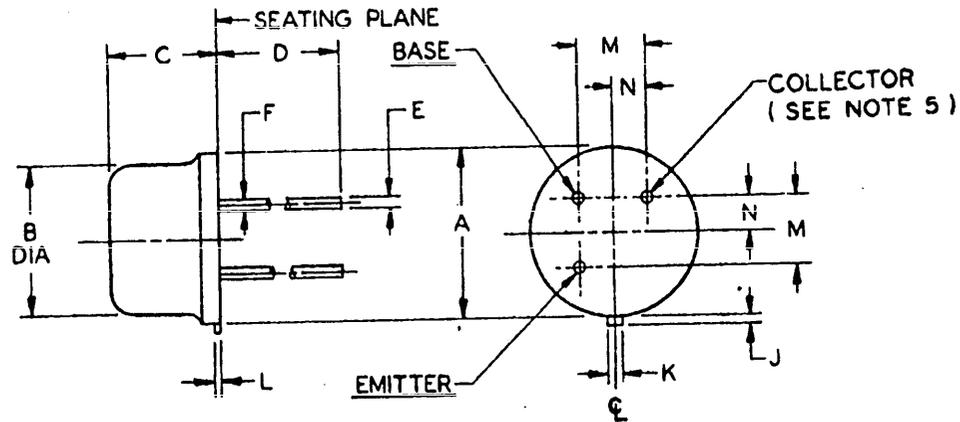

4.2 Qualification inspection. Qualification inspection shall consist of the examinations and tests specified in tables I, II, and III.

4.3 Quality conformance inspection. Quality conformance inspection shall consist of group A, B, and C inspections.

4.3.1 Group A inspection. Group A inspection shall consist of the examinations and tests specified in table I.

4.3.2 Group B inspection. Group B inspection shall consist of the examinations and tests specified in table II.

4.3.3 Group C inspection. Group C inspection shall consist of the examinations and tests specified in table III. This inspection shall be conducted on the initial lot and thereafter every 6 months during production.

NOTES:

- Metric equivalents (to the nearest .01 mm) are given for general information only and are based upon 1 inch = 25.4 mm.
- Measured in the zone beyond .250 (6.35 mm) from the seating plane.
- Measured in the zone .050 (1.27 mm) and .250 (6.35 mm) from the seating plane.
- When measured in a gaging plane .054 +.001, -.000 (1.37 +.03, -.00 mm) below the seating plane of the transistor maximum diameter leads shall be within .007 (.18 mm) of their true location relative to a maximum width tab. Smaller diameter leads shall fall within the outline of the maximum diameter lead tolerance. Figure 2 is the preferred measured method.
- The collector shall be electrically connected to the case.
- Measured from the maximum diameter of the actual device.
- All 3 leads (see 3.3.1).

* FIGURE 1. Physical dimensions of transistor type 2N706 (TO-18).

- NOTES:
1. Metric equivalents (to the nearest .01 mm) are given for general information only and are based upon 1 inch = 25.4 mm.
 2. The following gaging procedures shall be used: The device being measured shall be inserted until its seating plane is $.125 \pm .010$ (3.18 \pm .254 mm) from the seating surface of the gage. A force of 8 \pm .5 oz shall then be applied parallel and symmetrical to the device's cylindrical axis. When examined visually after the force application (the force need not be removed) the seating plane of the device shall be seated against the gage. The use of a pin straightener prior to insertion in the gage is permissible. A spacer may be used to obtain the .125 (3.18 mm) distance from the gage seat prior to force application.
 3. These surfaces to be parallel and in same plane within $\pm .001$ (.025 mm).
 4. Four holes.
 5. Pressed in.

* FIGURE 2. Gage for lead and tab location for transistor type 2N706.

TABLE I. Group A inspection

VOLTAGE WAVEFORMS

NOTES:

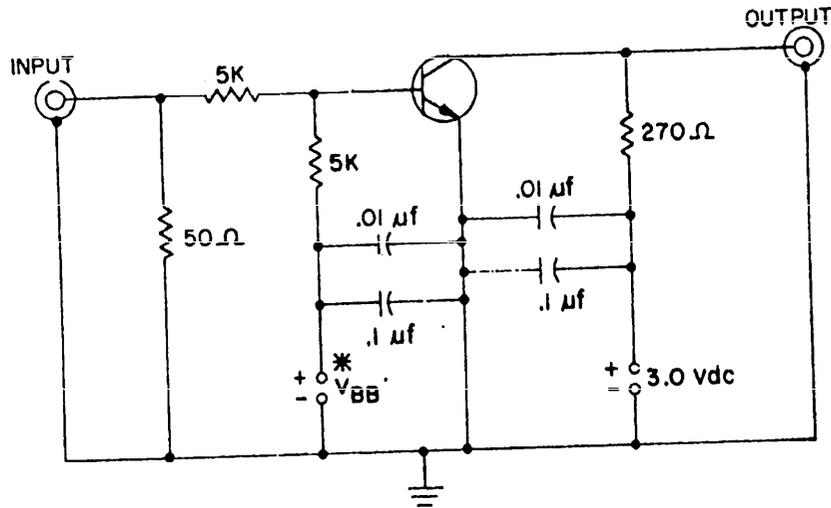

1. The input waveform is supplied by a pulse generator with the following characteristics:

$$Z_{out} = 50 \Omega, t_r \leq 1 \text{ nsec}, PW \geq 300 \text{ nsec}, \text{ duty cycle} \leq 2\%.$$

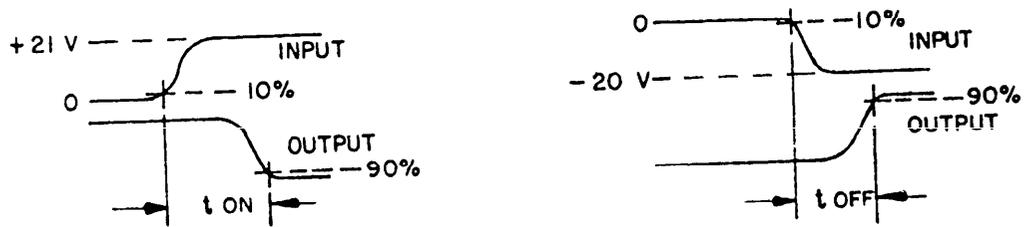

2. Output waveforms are monitored on a sampling oscilloscope with the following characteristics:

$$Z_{in} \geq 100 \text{ K}\Omega, t_r \leq 1 \text{ nsec}.$$

FIGURE 3. Charge-storage time.

* $V_{BB} = -4 \text{ Vdc}$ FOR t_{ON} , $+17 \text{ Vdc}$ FOR t_{OFF}

VOLTAGE WAVEFORMS

NOTES:

1. The input waveform is supplied by a pulse generator with the following characteristics:

$$Z_{out} = 50 \Omega, t_r \leq 1 \text{ nsec}, PW \geq 300 \text{ nsec}, \text{ duty cycle} \leq 2\%$$

2. Output waveforms are monitored on a sampling oscilloscope with the following characteristics:

$$Z_{in} \geq 100 \text{ K}\Omega, t_r \leq 1 \text{ nsec.}$$

FIGURE 4. Turn-on and turn-off time test circuit.

TABLE III. Group C inspection - Continued

Examination or test	MIL-STD-750		LTPD	Symbol	Limits		Unit
	Method	Details			Min	Max	
<u>Subgroup 4</u>				$\lambda = 10$			
Steady-state operation life	1026	$T_A = 25^\circ \text{C}$; $V_{CB} = 15 \text{ Vdc}$; $P_T = 300 \text{ mW}$ (see 4.3.4)		---	---	---	---
End points: (Same as subgroup 6 of group B)							

4.3.4 Group B and group C life-test samples. Samples that have been subjected to group B, 340-hours life-test, may be continued on test to 1,000 hours in order to satisfy group C life-test requirements. These samples shall be predesignated, and shall remain subjected to the group C, 1,000-hour acceptance evaluation after they have passed the group B, 340-hour acceptance criteria. The cumulative total of failures found during 340-hour test and during the subsequent interval up to 1,000 hours shall be computed for 1,000-hour acceptance criteria, see 4.3.3.

4.4 Methods of examination and test. Methods of examination and test shall be as specified in tables I, II, and III, and as follows:

4.4.1 Resistance to solvents. Transistors shall be subjected to tests in accordance with Method 215 of MIL-STD-202. The following details shall apply:

- (a) All areas of the transistor body where marking has been applied shall be brushed.
- (b) After subjection to the tests, there shall be no evidence of mechanical damage to the device and markings shall have remained legible.

5. PREPARATION FOR DELIVERY

5.1 See MIL-S-19500, section 5.

6. NOTES

6.1 Notes. The notes specified in MIL-S-19500 are applicable to this specification.

6.2 Ordering data. Procurement documents should specify the following:

- (a) Lead finish if other than gold-plated (see 3.3.1).
- (b) Lead material (see 3.3.1.1).

6.3 Changes from previous issue. Asterisks are not used in this revision to identify changes with respect to the previous issue due to the extensiveness of the changes.

INSTRUCTIONS: In a continuing effort to make our standardization documents better, the DoD provides this form for use in submitting comments and suggestions for improvements. All users of military standardization documents are invited to provide suggestions. This form may be detached, folded along the lines indicated, taped along the loose edge (*DO NOT STAPLE*), and mailed. In block 5, be as specific as possible about particular problem areas such as wording which required interpretation, was too rigid, restrictive, loose, ambiguous, or was incompatible, and give proposed wording changes which would alleviate the problems. Enter in block 6 any remarks not related to a specific paragraph of the document. If block 7 is filled out, an acknowledgement will be mailed to you within 30 days to let you know that your comments were received and are being considered.

NOTE: This form may not be used to request copies of documents, nor to request waivers, deviations, or clarification of specification requirements on current contracts. Comments submitted on this form do not constitute or imply authorization to waive any portion of the referenced document(s) or to amend contractual requirements.
